ROUND ROBIN NOV. * DEC. 1957

Volume XIII - No. 4

A Publication of the Borderland Sciences Research Associates -

CONTENTS: PAGES:

"Breaking Through The Light Barrier" .. .. 1 - 3
-(by E. G. Reed, BSRA)

"What Does The Wheel Of Venus Portend?" .. 4 - 7
-(by Gaston Burridge, BSRA)
-and-
"Moon Inhabited?" .. .. - (7)
-(by Derek D. Dempster)

"Flying Saucer Pilgrimage" .. .. .. 8 - 13
-(Comment on a new book)

"Our Mischief Or Our Chief Miss?" .. .. 14 - 15
-(G. B., BSR Assoc.)

"UFO Report From Japan" .. .. - 16
-(Excerpts)

"Letter From Ceylon".. .. .. - 17
-and-
The "Asian" Flu Racket -(17)

"Some Observations On
Electro-Magnetic Phenomena" 18 - 20

"What Is Their Mission?" .. .. 21 - 22
-(G. C. W., BSR Assoc.)

Advertising & Order Page .. .. - 23

BREAKING THROUGH THE LIGHT BARRIER

by
E. G. Reed, BSRA

The following reasoning, leading to the existance of a force believed to travel with a speed many times faster than light, is intended to open a field of research that may yield discoveries even more important than those related to atomic energy. Pure reason, based on limited experimental evidence, sometimes permits one to quickly bridge vast fields of research and through the use of new principles and concepts open the way to radically new discoveries and inventions. This occurred when the equation, Energy equals Mass times a square of a constant, led to the vast discoveries concerning atomic energy.

The reasoning for this, starts with the concept of a seven dimensional space, which if true, may explain the principle of flying saucers and provide a new approach to space travel. More important, it opens the way to experimentation on problems of every day living that are now being blocked by dogmas and superstitions of modern organized science.

A geometric point is a position in space having no dimensions. In respect to reality, it is absolute zero. Lines have only length, which is insufficient for reality. Two dimensional space is equally impossible. It has no depth. Three dimensional space is an optical illusion. Euclid's geometry is merely a logical discussion of something that does not exist in nature.

Some three hundred years before Euclid, Zeno pointed out that a thing cannot move where it is, since if it moved it would not be there. It cannot move where it is not, because it is not there to move. Therefore, motion is impossible. Motion is impossible in solid geometry. But since motion exists in all material things, it follows that three dimensions are insufficient to describe a real object. The fourth dimension, time, is essential to motion, since a thing can be at one place at one time and another place at a different time.

A body in motion also involves the fifth dimension, energy. Matter, which requires four dimensions for its description, can be converted into the fifth dimension, energy, and visa versa.

Five dimensions are still insufficient to describe natural phenomena. If a tree crashes to the ground in a place where there are no living things to hear, there would be no sound. Sound exists only in the mind. Sound is a part of the sixth dimension, thought. Without this sixth dimension there would be no way of perceiving or proving the first five dimensions, nor could any of the products of man's imagination exist. There is evidence that thought can become energy and energy can become thought in the same manner that energy and matter are interchangeable. Some future Einstein will write an equation for this relation.

This brings us to a seventh dimension, design, the ultima Thule, that dominates all the others. The history of evolution shows there were animals with embryonic eyes that had no value and played no part in their survival. The slow development of eyes in these animals was activated by a future need, proving that effect can precede cause in terms of time. In this sense, events of today may be the effect or embryo of things to be a thousand years from now. Hitler and the second world war may have been an effect and the later development of atomic energy a related cause.

It is conceivable that in the beginning God designed a universe constantly moving toward some goal, His design, in it's details became thought, thought became energy, energy became matter, and time began. Thus providing a clue to clear up the mystery of how a physical world could evolve from a non-physical cause. This concept of seven dimensions lays the foundation for a sixth dimensional energy, which for lack of a better term we will call thought or thought energy.

Space travel to be practical, involves the need for speeds far in excess of that of light. Yet, according to present accepted theory, a five dimensional object ceases to exist when it reaches the speed of light. The actual need for speeds greater than that of light points the way to the nature of forces that can break through the light barrier. The sixth dimension, thought, appears to provide the force being sought.

But first, some of the physical and measurable qualities of thought must be considered. Controlled experiments in transmission of visual images by telepathy indicate that intensity and clearness of image for the receiver, is not decreased by distance as would occur in a five dimensional radiation of energy. Yet, the clear reception of a picture broadcast by a brain at a great distance implies a medium of transmission as clearly as does television. Every part of such experiments deals with real measurable phenomena and is in no way a fantastic product of imagination.

Christ, whose work as a basic scientist has never been fully recognized, gave many demonstrations of the physical nature of thought. That faith (thought) can move mountains was not a prophecy of future bulldozers and steam shovels. His withering of the fig tree demonstrated the power of thought over plant life. Recently this experiment has been verified by the use of prayers (thought) to control the rate of plant growth. Dr. Wickland duplicated Christ's insanity cures (Casting out devils) many times. When a psychological effect involves the curing of a real injury, the psychological cause (thought) generated by the brain, must be as real as the physical injury it corrects. Had Christ's demonstrations of healing and His attempt to teach the principles to others been understood, more than half of all the sickness in the world would have been eliminated for all time. When Thomas examined Christ's body after resurrection, he was aiding in the

proof of materialization of thought. The body he examined was real. Cleops and one other saw Christ dematerialize on the road to Emmaus. That Christ was much more than a religious leader is indicated in John 21 verse 25, "There are many other things which Jesus did; but, if every one of them were to be recorded in detail, I suppose that even the world itself would not hold the books that would be written."

Experiments with very thin plastic film indicate that thought energy can be generated from non-living material outside the brain and that this thought energy can be used to duplicate real psychological effects. These experiments also indicate that the brain is a mechanical transformer that converts energy back and forth between conventional energy and thought or the fifth and sixth dimensions. Similar energy enables a maple tree to produce sugar and a rubber tree to produce rubber, both from the same soil. The physical structures of the trees enables them to produce energy that in turn manufactures different chemicals from the same materials, just as the brain structure produces thought.

Understanding of how thought materializes and de-materializes could radically change the approach to space travel. Thought may be as much faster than light as light is faster than sound. Fantastic as it may seem, it is conceivable that people and machines could de-materialize on earth and travel with the speed of thought and materialize on another planet many light years away. Since we have come to accept the belief that whatever man can imagine he can do, and practical space travel calls for speeds greater than that of light, it is not unreasonable to assume that the sixth dimension of thought provides the solution. Should man be able to travel by rocket ship great distances into space, it would then become possible to determine the relative speeds of thought and light to verify or contradict this theory.

.....Failure of Science to approach the problem of thought and related energies realistically has become one of the greatest crimes of modern times. Many scientists deny all phenomena that they, themselves, cannot readily explain in terms of accepted theories. Theirs is a superstitious fear of the unexplained. Like a timid soul in a haunted house, they do not have the courage to open a door to investigate strange noises. While realizing that neither man nor any of his institutions could exist without thought, they prefer to ignore its existance rather than open the door to a vast chamber of practical knowledge.

<u>The Coming of the Guardians</u> - 3d mimeo printing now available. About one-thrid of the text has been rearranged and some 35-40 pages dded; about 100 pages in all. Consists mainly of statements by the lark Probert Controls concerning the nature of the aeroforms (UFO). The only satisfactory and inclusive interpretation ever offered. The first two printings were sold at $3.00 but we have had to advance the price of this third issue to $ 4.00.

WHAT DOES THE "WHEEL" OF VENUS PORTEND?

by
Gaston Burridge, BSRA

With conservative Los Angeles Times publishing UFO sightings on front pages for four days running, we might think a new day was here. Perhaps one is!

While our Director, . . Meade Layne, has promulgated the "Etheric Concept", the "Fourth Dimension" explanation, the "Mat and Demat Theory" for UFO phenomena, I fail to find where he has even intimated he believes all such UFO occurrences originate in this manner. I do not believe he holds the view that no UFO is "material" or Interplanetary. Hence, this writing cannot be construed as contrary to his expounded general views. Nor is it presented with any intention of so attempting. Rather, because of things I learned this past summer, I outline this material merely as a matter I feel should be given our further thought in connection with the planet Venus as a UFO base.

Venus has been a mystery planet since the first "big eye" cast inquiring glances in it's direction. Most astronomers are night owls - except those who study the Sun! So Venus has been studied often by night. But in the clear, still air of northern Arizona, one astronomer studied Venus in the daytime! And what he saw there more than 50 years ago, is just now becoming recognized as possible "truth".

This daytime viewer of Venus was Dr. Percival Lowell, founder and endower of the Lowell Observatory in Flagstaff, Arizona.

Dr. Lowell's observations set the Science of Astronomy "on its ear". Lowell and Mars have been joined in controversy of major proportions for years. Fully as controversial has been Lowell's work and views covering Venus, but these have not made the headlines so often.

Most of the trouble with Venus is, she keeps herself covered up - with a thick cloak of atmosphere, that is! Contrary to her namesakes here on Earth, the planet appears to hold her cloak about her at night. Infrequently though, she has let the wrap slip from a shapely shoulder - and during the daytime Percival Lowell caught her at it a few times.

What Lowell beheld was a strange, "spoke-shaped" sort of wheel arrangement, on or near the Planet's surface. The spokes centered on an irregular "hub". These spokes were of rather uneven size and distribution around the hub. They appeared to be tied together on their outer extermities by a "rim" of something - something which

looked a duplicate of the stuff which made the hub and spokes.

Lowell penned some drawings of that which he saw. Because they have never seen anything like it on or near Venus through their own telescopes, most astronomers have been highly skeptical of Lowell's pronouncements.

Rather than use their own experience - gathered from many hours at a telescope's eye-piece - as a basis for guiding them in speculating what such markings might indicate, astronomers seem to have delighted themselves and their fellows, with searching for reasons why Lowell could not possibly have seen such things on Venus!

We have no aversion to, or quarrel with scepticism. But should we not try to be equally skeptical of all things? To spring a little new "set" into an old saw, "It is better to be sure than sorry!" However, let me also point out that Percival Lowell was paying his own bills. He was under no sort of compulsion, genuine or inferred, to follow orthodoxy. His financial position was secure. He did not have to consider how anything he said or wrote was going to set with the man sitting in the big leather chair. Lowell, himself, sat in that chair! Percival Lowell was "boss" on Mars Hill. Few of us are free of the dollar sign. It is foolish to say it does not influence our speaking or our writing - though perhaps not our thinking - if we wish to keep quiet.

Now comes the 1956 Convention at Lowell Observatory of the Association of Lunar and Planetary Observers - another free-lance outfit made up of persons not restricted in saying that which they think, at least astronomically. This Organization is directed by Dr. Walter H. Hass, who edits the Association's quarterly, "The Strolling Astronomer", from 1203 N. Alameda Street, Las Cruces, New Mexico. The Convention heard a paper, "Venus - The Unknown Planet", by Dr. James C. Bartlett, Jr., The Association's Venus Recorder.

This paper brought out that recent observations of Mr. Richard Baum covering Venus, were echoes, and rather strong ones too, of the earlier findings of Lowell nearly 50 years ago. But more striking than this was the matter regarding the findings of many other separately working, independent Association astronomers in these matters. Their results were reported to the Venus Recorder individually and concerned portions of markings they had observed on Venus at various times. When correlated, these separate reports formed a "picture" so similar to Lowell's and Baum's, as to be astounding!

Now, what may this mean? Anything more than perhaps Lowell was closer "right" than many have credited him these past 50 years?

It certainly does not prove there is this thing we know as "life" on Venus. And, of course, it does not prove either, those

markings which have been observed there are actually attached to the surface of the planet. However, it does indicate the deep, cloudy atmosphere surrounding Venus does disrupt once in a while for short periods. This dispersion would appear to point to some movement in the Venusian atmosphere. Such movement in turn, might well indicate differences of temperature existing on the surface of that planet. If so, it means Venus turns on its axis. The turning of a planet on its axis helps maintain its surface area at a more even temperature. It also aids in preventing the planet's sunny side from roasting to a crisp - the shadow-side being placed in the deep freeze. It assists in making the entire planet more usable.

Venus is 67,000,000 miles from the sun. Quite often, it approaches Earth as closely as 26,000,000 miles, which is 9,000,000 miles closer than Mars ever comes to us. Venus is frequently called "The Earth's twin sister". It is near the same size, mass and surface area - as far as we have been able to determine.

Because Venus is closer to the sun, some astronomers believe it is several million years younger than the Earth, hence is now passing through the geologic stage comparable to Earth when our coal beds were laid down.

Or, if you prefer to follow Dr. Immanuel Velikovski's "Worlds In Collision", Venus was a huge comet a moment ago - cosmically-clock-wise - which tangled with Earth once too often ending up the enigma it is.

Venus revolves around the sun in 225 of our days. Thus for each 100 years we count, Venus counts 162. How fast it may spin on its own axis is a question of vast portent and great difference of opinion. These opinions vary from once in 225 days, to one time in "several of our days". Nothing is known relative to the axis of this planet.

Considering these things, it does not seem unlikely "Mobile Intelligence" could afix and maintain itself there, and as we presently do not know what makes us Inteligent - if we are - we cannot assess the extent of those quantities elsewhere. It is possible Earth's climate is not conducive to propogating Intelligence in abundance. It may well be a younger planet could possess more essentials for the best flowering of Intelligence.

We should bear in mind it is most difficult for mankind to think of Mobile Intelligence occupying, or acting from, any sort of "shell" or "framework" other than like our own. We simply cannot conceive of any other sort of a "brain" than our own.

We should diligently attempt to change our thinking habits in this regard. We should prepare our minds and our lives to meet

Intelligences greater than our own, and to meet them in other than Adamic form! At least, we should not stand aghast at our introduction. Such procedure is impolite and will not "make friends and influence 'people'".

Venus is our closest neighbor - save our moon. From glimpses some of our fellows have had of this planet, we are rather forced to conclude it may not be such a bleak spot after all. From Swedenborg and Fontenelle, down to Adamski - "Maybe they have something up there."

Perhaps it would be best to keep an open mind - and an active mind in this regard.

MOON INHABITED? by Derek D. Dempster, from Flying Saucer Review Vol3 - No6, Nov. - Dec. 1957

But what if the moon were not virgin territory; and intelligent beings had already colonised our natural satellite or used it as a base! The launching and exploding of atomic bombs upon its surface would be nothing short of criminal, even in totalitarian state law. So, before man takes it into his head to start practice on the face of the moon, he should consider with the greatest care the ultimate results.

Of course, what most pure scientists would be more interested in is a rocket which would pass round and behind the moon, making a complete survey and record of its surface and force fields before returning to earth. Although the guidance problem would present enormous difficulties the plan is technically feasible. It should not take too long to put into action.

Whatever I have to say, the race into space is on and man is riding on an orbit of apprehension and suspicion. What a pity it is that it is not so much the peaceful application of our escape from gravity that makes news but the destructive aspects of it. But perhaps when man finally discovers that his achievements cannot properly be applied to war and that the satellite will revolutionise human habits he may resign himself to peaceful pursuits. Serenity will have come to the world at last.

By now Sputnik I has travelled a further 36,000 miles. It has been around the world 108½ times.

"FLYING SAUCER PILGRIMAGE"

Flying Saucer Pilgrimage, by Bryant & Helen Reeve. Private research and travel; Illustrated, 304 pages. Amherst Press, Amherst, Wisconsin, 1957. $3.50

Do not be misled by the easy and chatty approach of the opening pages of this book, or by the hint of a travellogue. The Bryants, husband and wife, undoubtedly travelled their 23 thousand miles or more, from Canada to the tropics, and have experienced strange things and told them well. But the true tale of their adventure is not geographic, but of the wind that blows between the worlds.

It is a book of the Borderlands - or the environs of life and consciousness, described with detachment, dedicated "To the Saucerers of the world - known and unknown" and to "New Age pioneers ... bearing the truths of inhabited outer-space" - 'Till secrecy shall knowledge be.' "Knowledge is cosmic honey", said the Yada Di Shi-Ite, and the authors quote him on many pages. But it is not a doctrinaire book, not mystical or religionistic in the usual sense of the words - nor, for that matter, scientific in the orthodox acceptances of scientism-

But it is populate with facts and concepts with which scientific thinking is daily more concerned, and with metaphysical ideas inseperable from them. That such supposed separation is sheer dichotomy is the true sowing of dragon's teeth for the ending of the old order and its fixations.

There are, I believe, something like a hundred books, about half as many periodicals, countless leaflets, pamphlets, small brochures, dealing with Saucers, space-craft, UFO', the immense variety of the 'inexplicable sky'. The appearance of these phenomena presents a world-wide puzzle not unmixed with apprehension. As usual, earth people met such reports at first with derision and denial - and there still are millions who have not yet learned better. Because it is really 'much later than we think', these slow resentful ones will yet have to learn the hard way.

This book is not devoted to their needs. It is not an attempt to prove the existence of the space visitors. Nearly all of that spade-work has been done, whether the sophisticated know it or not. What the turn of the wheel now brings upward is the shrewd instructed appraisals of writers who are not afraid to employ every recourse of knowledge and of possible knowledge. Does that imply metaphysics, spiritism, occultism, parapsychology, the ancient wisdom, mysticism? Who cares what name is given to a source, provided only it is productive, gives access to new understanding? Critical receptivity is a phrase for this attitude - and, 'to accept the unexpected with

equanimity'. Most of what is happening in the world now and likely to happen soon will be 'unexpected' - unwelcome and misunderstood.

With permission of the author we make short quotations - arbitrary as Caliban, 'just choosing so' - but the only way to get at the fine sound core of this book is to buy, keep, read, and remember. The numbers are page references:

QUOTES

"If this shocks you a bit, just remember that the subject of saucers at this time is not respectable - no, not even of physical saucers. They will be in time but right now they are not part of "tradition", or of eminent conservative respectability, in education, astronomy, science, engineering, religion or government. . . (117)

"Very few of our 'isms and 'ologies are going to stand up under the impact of unfolding cosmic truth. It is going to take its toll of some of our most time-honored and sacred beliefs. Few branches of human learning are going to come through unchastized (119)

"When we found out that flying saucers led us right out of this world, we ourselves had to face a decision - whether to follow them into supra-physical realms or retreat to the physical ... The truth turned out to be something much bigger than we ever expected... We have learned how little we know, and <u>something</u> about this great subject ... We have reached a point where cosmic receptivity is the main factor (119-120).

"Thus far we have acted as reporters. In the remainder of this book we are going to "lay it on the line". Some of you will go with us, others will not ... We have come to the point where we realize that flying saucers per se are no longer of prime importance. From now on we are not even particularly concerned with physical proofs (120). New Age students will understand that this parting of the ways which is now going on all over the world is a very deep thing in itself and carries with it a tinge of cosmic sadness. (But) it is a New Age Dispensation, is it not? (121 f)

"(CHAP. XVII - pgs 123-132 - Mark Probert and the Inner Circle): Mark Probert is the famous and respected sensitive of San Diego, California, with whom Meade Layne and associates worked in bringing forth the remarkable book, The Coming of the Guardians. Mark and his Inner Circle present an outstanding phenomenon all by themselves ... The head of the group is an advanced being called the Yada Di Shi-Ite. (127).

"The Inner Circle do not claim to represent ultimate authority (but) they seem to us to have a tremendous cosmic outlook". ChXVIII carries the heading: <u>They Answer Questions on the Flying Saucers</u> - and in it 34 inquiries are made and replies received.

(NOTE BY THE REVIEWER. Considerations of space and the usual obligations of copyright will not permit extended quotation from these very important pages; I can only say that the information checks with data received by myself and associates, from these same Controls, from 1946 down to the present date. The Controls have not, therefore, altered in any important respect their interpretation of the nature and purpose of the aeroforms (Saucers and other phenomena). This interpretation, properly understood, will be found adequate to cover all known phases of these strange manifestations. The BSRA, tho' under many difficulties, has long tried to make a piecemeal presentation of this material. But in PILGRIMAGE we have it in collated and organized form, and as 'down to date' as such subjects can be.

For the sake of the record I add the following items - that the Probert Controls have always represented themselves as excarnate humans; they were born, lived and died on this earth. They are NOT "space people". They do not come in 'space-ships'. Their dwelling place is not among Etheric beings. Some of them have contact at times - or at desire - with etheric races. Presumably they may be said, in 'occult' terms, to exist on different frequency levels of the "Astral". Apparently the average excarnate human knows nothing about etheric worlds and people. The Controls are not "earth-bound" entities, by any means; they are simply human beings like ourselves who have learned much, who have superior sources of information, and who are motivated by wisdom and good will. They are NOT the Guardians (mentioned in Pilgrimage) and in the BSR book with that title.

So far as our very limited information goes, there are a few humans who have incarnated among "etheric" people, or "space people", and some of these make use of, or cooperate in the use of space-craft. The fact that Etherians often resemble earth people does not necessarily mean that they have lived on earth, or were born here. The "true" etherian, we are told, is born, dies, and reincarnates on his own 'plane' or frequency level. But the statements in this paragraph are NOT to be attributed to the Probert Controls. It is well to keep in mind the enormous complexity of these "New Dispensation" problems.

A question of more immediate concern, perhaps, arises over a passage in Pilgrimage (page 135), that no space ship can enter earth's atmosphere without consent of the Guardians. This, say the authors, "took away any fear we previously had of unfriendly ships landing on earth". But the fact is, that a long listing could be made of grotesque beings, warnings, acts which seem dangerous or are at least very frightening, malicious mischief or what seems so, poltergeist disturbances, mysterious disappearances possibly connected with the "visitors". This has not escaped attention, and H. T. Wilkins, Trevor James and others have collected much data. There may indeed be - and devoutly hoped for - a "Guardian Service" for the huge interplanetary craft and/or the "five or ten million space-ships now in the upper atmosphere" (pg. 141, Pilgrimage) - but even in this huge

network spread for the trespasser there must be flaws and broken meshes, so that not only goblins, but kidnappers and arsonists, banditti from the blue slip through bent on mischief. Occultists know something about the Watchers and Occult Police, in constant demand against Astral intrusions. Perhaps there is an analogue here. Perhaps the authors of Pilgrimage are on this point a little inclined (let us hope not) to over-optimism, which then can be laid only at the door of the Inner Circle.

But let us all remember that the Reeves' book is a reporting job, and so is this one-tenth-adequate review of it, and that the Probert Controls are reporting too, but on the concerns of all Terra, of the solar system and of galaxies in unthinkable space (yet closer to us than hands and feet) - and with 'cries of incommunicable news'. Nothing in the universe seems permanent, except Change itself. How then can the smallest fragment of it be described - when 'the actuality of ANY fact or thing is infinite?' There is little doubt in my own mind that there are interstices in the cosmic net, and that creatures of the Abyss creep through them in their Time-meet-with-us when all things are a little different - or very much so.

A FEW PHRASES, highly condensed, from the replies of the Probert Controls. (The reader should have the entire chapter (XVIII) before him)

Q. 2. Yes, space ships have been known to all races since the most ancient times . . .

Q. 3. Yes, the governments are withholding information. They are frightened . . .

Q. 5. Yes, earth men have met and conversed with space people many times. Yes, they have taken short rides in space ships ...

Q. 7. Yes, there is an interplanetary government of the solar system . . .The planetary hierarchy is referred to as the Guardians ...

Q. 10 These Guardians are space-beings or Etheric beings ... They live in other densities ... Their origin is not planetary...

Q. 11 Space is not vacuous ... it swarms with life.

Q. 12 Venus is not as hot as people think. . .

Q. 15 Space people can and do mix with earth people . . . at times. You are space people yourselves...

Q. 16 When you relearn how to control the frequencies of matter ... Fields of energy in space . . .

Q. 17 Space ships convert their frequencies ... takes them out of
b your vision ... The 'crossing of space' is instantaneous ..
18 your body would have to be rechemicalized before it could
19 enter other frequencies. . . Space people know how to do this... earth people may learn this in time.

Q. 20 Falls from the sky - should space really open up all kind of things would fall from it
Q. 21 'Holes in space' simply means other frequencies ... 'Angel hair' - as you call it is luckney in my language . .
Q. 22 (luckney) is a radar shield for etherships. . .

Q. 24 There are between 5 and 10 million space ships in your upper atmosphere... Space ships may be little discs or five miles or more in diameter . . . They do not need physical bases
Q. 27 There will NOT be a flip of the earth's axis . . . There will be floods, (ice-caps), and great storms
Q. 28 Atomic power ... scientists who are mad in the head ... effects will appear slowly
Q. 29 Fireballs ... time for warnings grows short ... Man can and may destroy himself, but not the earth
Q. 32 possible evacuation of earth (in part) - danger of pure
Q. 33 energy from the sun . . .

Our quotations take us about half-way through PILGRIMAGE, and it is a pleasure to learn (in Ch. 19) that in spite of everything our earth "is a very beautiful spot from space -- like a beautiful oasis in the vast sea of space. The Guardians know that your earth is the most beautiful spot in the solar system. It is the most livable spot in your solar system" So speaks the Yada, and Astronomer Ramon Natalli supplements him: "Observing the earth through these huge astro screens on Venus, it is found to be a multicolored jewel, with a comparitively short comet-like tail trailing sunward from it. I would say it is the most beautiful planet in the entire solar system. The colors due to the changing seasons vary considerably. . . " From this relief the authors go on with Saucers and Semantics and a few much needed definitions:

A "true" space-ship is inter-planetary as they understand the term - and the facts - and can make flights within the confines of a solar system by space-time methods. They are also inter-galactic and capable of fuelless flight to any part of the universe, and can also employ instantaneous means of flight. "Teleportation is the process of reducing a formed object to thought energy, mentally directing this energy, and transforming it back again into the original form." Levitation and emergence are also words of great importance in the proposed After-Saucers Dictionary (and so might be the genetic word aeroform, long ago recommended by BSR writers). But let us be careful with astral, spiritual, psychic (and many others belonging to the vocabulary of spiritism and spiritualism: they are sound factual terms but they do not belong to space people and conditions). But to define outer-space as vacuity, (p. 156) the black void, or as frequencies or densities - of what or in what, if you please? - obviously will never do! That only substitutes one word for another. Aristotle did better than that when he 'defined

space as The Container. But the authors of PILGRIMAGE do not really accept the smile of the Chesire cat as an entity; only, they are over-timid (by my reckoning) about the concept of the Ether, which now again 'creeps, climbs and intrudes' into atomic physics.

Also, in dealing with steps of emergence (pg. 214) the authors have listed them as follows: 1. Decrease in vibratory frequency. 2. Decrease in density. 3. Loss of energy. 4. Polarization. This would be materialization viewed from 'our side' - when an invisible and intangible thing or being becomes visible and tangible. This same "mat" process if viewed from the "other side" would be "de-mat", and is said to involve (1) Increase in vibratory frequency (2) absorption of energy (4) polarization as a return to the original energy-form. Now if for the nonce we use the word density in its most common and polloi sense, this increase and decrease concept is the key to the whole of the space-ship (ether-ship) phenomena. Please note that a space ship IS MATERIAL for us when the ether-stuff of which it is made is vibrating on a frequency perceptible to our senses: and it is IMMATERIAL (intangible and invisible) when its frequency does NOT cause a sensory response. These frequency levels resolve themselves into differences of density, and the quotation above shows that Eng. Reeve goes to the heart of the problem, whether he likes to refer to the ether or not. So far as I know he is the only American writer who has the right approach and the courage to do this, .999 of them being intimidated by the contemptuous noses of .999 of the text-book scientists.

Since in these pages I write primarily for the BSR Associates, I can congratulate the m on the timely appearance of PILGRIMAGE, on its support and agreement in substance with hundreds of pages of BSR publications, and on the unique advantage of instruction by the Mark Probert Controls. For other readers I repeat, that no one on this side of life dreamed up the "4-D" or Etheric interpretation of the UFO phenomena. It was given to us ten years ago, in a most impersonal and detached manner, through the deep-trance mediumship mentioned, and we once again honor both the incredible gifts of M.P. and the patience and vast learning of the Communicators

Other excellent short chapters in PILGRIMAGE include Outer Space and They that Dwell Therein - - We and They - - O.S.C., (Outer Space Communication) - - For Engineers, Scientists and Thinkers Everywhere - - Religion, Philosophy, and the Flying Saucers - - Prophecies and the Saucers - - The Golden Age - - Publisher's Interview with the Authors - - Book List - - Educational Course on Saucers - - Illustrations (290 - 304)

- - - - - - - -

For the convenience of our Associates we have a few copies of "Flying Saucer Pilgrimage" on sale at the publishers price of $3.50. Order from BSRA Headquarters, 3524 Adams Ave., San Diego 16, Calif.

OUR MISCHIEF OR OUR CHIEF MISS?

Reported by G. B., BSR Assoc.

In the October issue of Missiles & Rockets Magazine, page 37, under the heading, "News And Trends", is published a resume of a technical paper delivered by the University of Maryland's astrophysicist Dr. S. Fred Singer. This paper was delivered before the Eighth Congress of the International Astronautical Federation, in Barcelona, Spain, October 7 through 12.

Dr. Singer's detailed paper is said to have demonstrated the feasibility of testing missile-launched H-Bombs on the Moon! Singer insists that such testing of H-Bombs not only will free the earth of any danger from radioactive fallout, but will also provide valuable scientific data as well. (Our underlining).

"Some of the debris kicked up from the blasting craters on the Moon may result in dust particles and even boulders bombarding the earth! (Again, our underlining).

Dr. Singer thinks the boulders would probably be large enough to be recovered here pretty much intact. Study of these Moon-samples would provide, he says, valuable data on the history and current state of the Solar System.

Dr. Singer suggests that nuclear bombs will soon become far too large for safe testing on earth! (Our underlining).

"It is difficult to predict", Singer continues, "what will happen when we 'progress' to the point where truly cosmic-bombs can be produced, but since such a development is inevitable, we might as well face it." (Our underlining, otherwise as quoted).

Dr. Singer further argues that sending an IPBM, (Inter-Planetary Ballistic Missile) to the Moon, 240,000 miles away will be no more of a technical problem than launching an ICBM, (Inter-Continental Ballistic Missile) 5,000 miles. Astrophysicist Singer thinks there would be great weight-saving in such a Moon*missile since it would not need to carry either a heavy "reentry nose cone", or the highly refined guidance mechanisms necessary in an ICBM. He thinks the moon a much easier target than a city! And again, he sees the development of such an IPBM as "inevitable"!

"Advantages" of this proposal are given. They include, "good record of the power of the H-Bomb for all to see." Also, such testing would relieve the need for expensive, space-consuming test ranges here. Further, we would be less dependent upon weather considerations here for making test shots. Again, the new craters formed on the Moon would provide us with "unique opportunities for perpetuating

the names of presidents, prime ministers and party secretaries"! (Which, of course, is something devoutly to be sought.)

In addition to all these benefits, there are numerous scientific others to accrue to us. These include new theories of meteor craters; the study of meteoric dust effects on the Earth's weather; study of the motion of interplanetary gases with respect to the Earth; study of magnetic and electric phenomena; etc..

To escape our earth's gravitational field - or force, if you like, it seems the moon-missile would have to assume a peak velocity of at least 35,000 feet per second. This is some 40% higher than the velocity needed to set an earth satellite into its orbit.

A point of light from an H-Bomb flash on the Sun would be 20 times as bright as a similar point of light on the Moon, says the article, so it would appear the Sun is at least not forgotten in future plans!

A 100-megaton bomb, (mega means "million" - so we are talking about 100 million tons!) would blast a crater on the Moon's surface 12,500 feet in diameter and 1800 feet deep! A 1000-megaton bomb would dig a hole 25,000 feet across, and 3,000 feet deep!

This is said to compare favorably to "Clavius", the largest natural crater on the Moon, which appears to be 146 miles across and 16,100 feet deep!

The account of Dr. Singer's paper is brief. We have written him in an effort to obtain a copy of the entire paper as delivered by him at the Barcelona meeting. It may contain other startling proposals neglected by the short resume given it in the Missiles & Rockets account. However, this will serve to give BSRA members an idea of how some among us are thinking - or perhaps not thinking - and they may wish to comment.

NOTE ABOUT EXPIRATION NOTICES

We have been reorganizing our methods of sending out expiration notices, as in the past it has been very difficult to tell whether subscribers wished their subscriptions to lapse or be renewed at the time their subscriptions expired. We are now sending your expiration notice in the next to the last issue paid for. If no renewal notice has been received by the time the subscription expires it will be terminated.

If for any reason you wish an extension of time please send us a post card or make a notation on your expiration form and we will try to make suitable extension or other arrangements with you.

U-F-O N-E-W-S R-E-P-O-R-T : Official Organ of the FLYING SAUCER RESEARCH GROUP IN JAPAN. P.O. Box 18; Isogo Post Office Yokohama. Editor, Yusuke J. Matsura.

The "Overseas Edition" includes short items headed as:

Flying Cocoon Photographed Over Enoshima - -

Japanese Have Contact with Space People. ("A Japanese rising musician in Hayama who have contact with space people was reportedly, and he will shortly leave earth for space travel by a saucer, which was invited space people, according to his letter to a friend in Tokyo."

Little Space People appeared in 1609. ("In the morning of April 4, 1609, a little man to rush into the Sunpu Castle, when, many soldiers to be intercepted, but a little man to take a glance round one and passed in a hand up to heaven (was it coming from heaven he gave a hint? The Japanese old historical book described to a little man, were looked like to children, and have not fingers - all in skins (he dressed in space suits?). The soldiers wonder-stricken ... reported to the owner of the castle. Then Ieyasu ordered to away, not to kill. However, now we can think this little man want to meet with Shogunate Ieyasu.")

Saucer Have Landed in Japan ? (In August '57. Three Instances).

It Was Dropped from Saucer or Not ? ("Mysterioud Metal Foils Fell in Choshi City After A Saucer Had been Seen")

Mystery Object Over Matsue. Round Object Over Yokosuka. Also Over Yokohama ... Egg-shaped object over Nanking ... Huge Sunspot appears...Fireball Over Kanaya and Yonago ...

The numerous Japanese groups now appear to have united in an ALL JAPAN FLYING SAUCER RESEARCH FEDERATION. Mailing address at Isogo P. O. as in Para. 1 above. The bulletin is small but interesting; no price stated; exchanges solicited.

LETTER FROM CEYLON: Assoc. Robert A. Nelso to RR Editor
6, Station Road, Colpetty, Colombo, Ceylon

I feel sure there are many of your readers who would value your comments on the number of comet sightings this year.

The Arend-Rolland Comet was widely publicised and seen by many observers I believe. I was in Ireland at the time of its appearance and had a clear view on a number of evenings. Then in August without warning another comet was announced. On the night of August 14th I caught sight of a headline of a new comet being sighted. The same night about 11 pm I observed this comet clearly, both with the naked eye and through binoculars from where I was staying in Ballybeique, Co. Kerry. Surprisingly little however was said about it in the press and the same seems to apply to yet another sighting which I find reported under "Berne, Oct 22." This comet is said to have been observed by a Mr. Paul Wild on the night of Oct. 18-19, and to be traveling at great speed, 20 degrees a day, and also to be unusually near the earth, approximately 6 million miles.

I am not familiar with the habits of comets but these seem to me remarkable details. And what would earlier ages have thought of the phenomenon of three comets in one year ! Once again, is something unusual in the heavens being played down?

THE "ASIAN" FLU RACKET by Owen B. Hunt in The Anti-Vivisection magazine November, 1957.

The "Asian" Flu Racket has been pushed to the utmost by the powerful drug companies and the A.M.A. Every effort has been made to produce the appearande of an epidemic, but push it as they will, the figures fall far short of anything that would justify the term.

In The New York Times of October 8th, the Health Dept. of that State reported that there had been 71,504 cases of RESPIRATORY illness since the end of September, but only 13 deaths. It is to be carefully noted that the deaths were under the general heading "respiratory diseases" which includes all forms of colds, grippe, influenza, pneumonia, and so on.

The Philadelphia Inquirer on Oct. 22nd quoted a report by the Pennsylvania State Dept. of Health to the effect that there had been 173,000 cases of respiratory disease in our State with 58 deaths.

Official reports from the City of Philadelphia showed 131,000 respiratory cases with 13 deaths. The number of cases would be only 65 of the City's population, and it is no greater than occurred from time to time, when there is an outbreak of "colds" without any ballyhoo about "Asian Flu".

SOME OBSERVATIONS ON ELECTRO-MAGNETIC PHENOMENA

It has been found that all of the elements that make up our material substance give off energy or radiations under normal conditions and at room temperature and that the presence of an individual element or the combination of two or more elements can be identified from the radiations or the energy emanating therefrom.

Since the organs and tissues of the human body are ordinary compounds of two or more of the elements of material substance, it seems possible to identify the presence of such organs and tissues by "tuning in" to the emanations radiating from them.

Since a dis-eased tissue or organ is similarly made up, it may be equally as easy to identify the presence of a diseased condition and thus one of the most important discoveries of the age would be the ability to positively determine the presence or absence of any specific disease for which the operator may be searching.

It has long been an established fact that most disease conditions are only subject to positive determination after they have been allowed to develop to the point where destruction or damage to the body and often times death has taken place.

By utilizing this new concept, disease may be identified the instant it invades the body and thus treatment can be started long before damage is accomplished.

Caruso, the great Italian singer, used to entertain guests at a party by an interesting little experiment involving mechanical vibrations. He would take a wine goblet, tap it with his fingers to make it vibrate at its own frequency, then he would sing a note of the same frequency while holding the glass close to his mouth, thus the glass would be caused to vibrate at its own natural frequency, but at an amplitude greater than its elastic limit, with the result that the goblet would be shattered into many pieces and it would cease to exist as a wine glass.

It is held possible to emulate the mechanical phenomenon demonstrated by Caruso by adjusting the treatment instrument (he pitched his voice) so that it in itself will produce vibrations of exactly the same rate as the foreign cells we wish to destroy. By forcing these cells to vibrate at their own natural period of vibration but at an accelerated intensity they will destroy or shake themselves to pieces.

The second phenomenon is illustrated by a demonstration that Fritz Kreisler used to make when he would tune the

strings of two violins until their tone response was identical, place violin number 1 across the room from violin number 2, pick a string on violin number 2, allow it to vibrate for an instant and then stop its vibration by putting his hand on the string. Those in the room could then hear violin number 1 because the vibration set up by the momentary picking of the string of violin number 2 would travel across the room and due to the harmonious attunement of violin number 1, its string would start to vibrate.

Now we come to the relationship between the above described phenomena and the actual operation of such devices involving the use of E.M.energy. Just as Kreisler did with his violins, so can the circuit of this (radionic) instrument respond to any specifically desired frequency, and if a source of energy vibrating at that frequency is present it will manifest itself by causing the instrument to give a reaction.

By adjusting the instrument to first one frequency and then to another a complete search of the entire frequency band involved can be made and direct evidence will be available to indicate which frequencies are present and which are not.

It has been demonstrated that all matter seems to give off or radiate energy. Each different type and kind of matter produces a specific, peculiar vibratory rate in its radiant energy. Thus apparently liver tissue gives off a specific "rate" of "frequency" and we can attune the instrument to that same "rate" and get a response that will indicate that liver tissue is present. By the same token the instrument can be attuned to the specific frequency that emanates from a cancer, tumor, a streptococcic infection of the gall bladder or any other undesireable condition, and if such undesireable condition is present the instrument will indicate by giving a reaction.

It has been held that it is possible to go still further with the E.M. Instrument and take what remained in the form of dead cells (disintegrated disease germs, etc.) and still further disintegrate those materials and oxidize them so that the load on the liver and kidneys is minimized.

There is really nothing mysterious about the operation of an electronic device used to improve the health and well-being of an individual. It is just the application of already established phenomena. The surprising part to the writer is that more people do not grasp the reasonableness of the idea and take full advantage of it.

It must be borne in mind that these electronic diagnostic instruments are not human any more than a motor car is human. Standing in the garage, a motor car is of very little

use as a means of transportation but guided by an experienced chauffeur the car turns out to be an excellent means of transportation. By the same token, diagnostic instruments must be operated by an experienced technician who is also a doctor or who works directly under the supervision of a doctor.

It must be noted, however, that the instrument will not automatically attune itself, for instance to the vibratory rate of a streptococcic infection of the appendix but that it is up to the operator to do that. Too often the operator makes a superficial examination. In the hands of an experienced operator the instrument is like the fabled "oracle" of old but if improperly used it is in the class with the motor car sitting in the garage.

The apparent advantage to doctors is that they can depend on personal physical observations but don't have to wait for the full development of symptoms but take their problem immediately to the diagnostic instrument, then from that, the sum total, they can make an accurate, intelligent analysis of the condition of their patient and start treatment before the disease does too much damage.

It is unfortunate that human beings have in the past tended to resist any change that means that they must revise their mode of thinking. All down through the ages, organized minority groups have tried to entrench themselves and fight any change that might upset their mode of thinking, upset their control over human destiny or disturb their pocketbook. This happend for example when an early day philosopher declared that the earth was round. It happend when Lister and Pasteur came out with their world-startling discoveries regarding germ life. The Curies were violently opposed by the so-called scientists of their day and were forced to make their discovery of radium under the most adverse circumstances because of the same type of attitude.

The speaker was building X-Ray apparatus in 1914 and can remember a doctor was branded as a "quack then, if he dared to install X-Ray equipment in his office.

Today, this same type of negative thought is all too prevalent in regards to E.M. phenomena and one hears the word "quack" over-worked by the same kind of people who would have derided a Pasteur or a Curie. In the light of the aforementioned comments it may well be the time to re-evaluate one's thinking along positive and constructive channels towards E.M. phenomena, the people working in this field, and the progress they are making every day in spite of powerful and organized opposition.

WHAT IS THEIR MISSION?

Ten years ago - say, in 1946-47 - the phenomena of the aeroforms (UFO) were noted (if at all) with incredulity and derision. Today they are the subject of intensive and somewhat apprehensive research by skilled investigators in all countries. The first great question was simply: Do these objects exist at all, in an objective and factual sense? Today and among informed people the question has become: Why are these beings visiting our planet? What is the significance of this vast and complex aerial activity. Are these 'flying saucers' a menace, or a promise and a hope? Their actions may be construed either way, and the interpretation is our personal product. And here, I think, is the all-important inference: -

> Beings who range the solar system and perhaps the cosmos may have ideas and ideals, from their larger understanding, quite different from ours. What seems to us harsh, or bad or morally wrong, may be right and ultimately kind and good in the judgment of higher intelligence.

What right have we to insist that all the Hierarchies of the Cosmos conform to our earth standards...? But all argument on this point is obvious to the point of futility. It seems quite plausible that our opinions may have no effect at all on the decisions of extra terrestrials. Well, these two paragraphs seem called for as a foreward to a letter lately received at BSR Hdqrs. from which I am going to quote - but without further comment, except that we neither accept or reject the writer's remarks as being more than speculation and possibilities, which nevertheless should be made known to BSR Associates - who in turn will find no difficulty in picking out the crux of the whole matter.

M.L.

To BSR Director: ASSOC. G.C.W.

I see by the papers that Reinhold Schmidt was committed to a Nebraska mental hospital. But one must not always jump to conclusions.

Back in 1949, the CSI (Los Angeles) had a man come to them. He was a college graduate and had gone into farming as a business. He told of a saucer hovering over him while he was out in the fields and he had witnesses and "angel hair" to prove it. He was questioned by the CSI and they found that he was uneasy, he had not eaten

since this happend and was very tired: also his memory was in question, This last is important!

So a medical doctor, on CSI, gave him an examination and it was found he had acute Gamma Ray Sickness. He showed it in the red cells, diarrhea, malaise, lassitude, etc. It was a very severe case.

Do you remember Ruppelts chapter on, "The Radiation Story". He never said what kind of radiation the scientists found. Alpha and Beta rays are easily stopped. So, it does not seem likely that it was those. Anyone, know?

Recent theories have stated that these disks might get their lift from annihilation radiation. A continuous supply of positive and negative electrons which unite to form great energy and a large number of gamma rays could be directional and made to move outwards radially and interact at the peripheral edge of the disk and produce the necessary lift, is one of the latest theories. Don't ask me how the beings inside are protected, I can only guess. Here is one for Mr. Probert.

So, here we have a story of the lady or the tiger. If Reinhold Schmidt did go close to a saucer, he could be a very sick man, and if he didn't he might be in need of medical help.

Bender's latest statement makes my blood run cold! He says we shall all know soon this "cruel" information that will "affect so many". Schmidt said he was told, "You'll know in the near future what this is all about". My guess; we are all in for a terrible shock!

We were sitting around doing some blue sky thinking on Bender the other night and we thought that it did not sound like an earth tilt or a Nova because Bender states that some UFO books have come close to the truth. Bender seems to think the truth will come out no-matter what the airforce does. A biologist from UC. here said, I'll be darned if it doesn't sound as if they were going to sterilaze us. Now, don't think for one moment I think this is true. One makes a postulate and then looks around for proof. It does seem to fit Benders statement that it is cruel to so many. Why did Bender think the truth would come out in 1957? Well, 12 years after the atom bomb Aug. 1945, would make 1957 and a lot of children will reach puberty this 12th year. And you have got to admit that Our Guardians would have the right to do this, as we were made in their image. There may be some genetic affect we don't know about from the atom bombs, in that there is no road back even if we explode more or no-more, now.

This is a shot in the dark and we all must observe trends now more than ever. It does not seem likely that Bender could now talk without permission. And if permission is now given, the truth is about to come out.

LATEST TRANSCRIPT from the Mark Probert Seances, #32, 10 pages mimeographed - This has been considerably delayed, but is now ready for distribution. $.50 each.

- -

We have on hand a larger than usual supply of Round Robin XIII-1, XIII-2, and XIII-3, which we will be happy to send to any of your friends who might be interested in thus being introduced to Round Robin, if you will send us their names and addresses and $.20 each, or $.50 for 3, to cover the cost of postage, envelopes, and handling. For your convenience in ordering we list below the tables of contents of these three issues. How about such an order as a Christmas gift? Material published in Round Robin is not the kind which becomes "dated".

XIII-1 Anti-Inertia, Dowsing, The South Pole's Bulging Ice Cap, The Cameron Aurameter, Did Tektites Come From A Lost World, Blood Nature of the Space People, The Rh factor in Relation to Dowsing, Hand Writing On The Wall, Valence Angles of Hydrogen and Oxygen, Delawarr Publication and NICAP Magazine, Map Divining, The Expanding Case For The UFO, Double Talk? No!, We The People.

XIII-2 Less Weight And More Flight, The Luminosity of Flying Saucers, Dowsing of Straight Line Forces, The Return of the Dove, Pick The Bones Out Of This, Excerpts Sen. Holifield's Address, A Point Of Order, The Invisible Powers.

XIII-3 Anti-Matter, Text and Pretext, The Great Analysis, Flying Saucers Uber Sudafrika, Easter, The Birthday of the Gods, Insecticide Air Raids, Biefield-Brown Effect, Prof. Jessop Explains, Invisible Powers.
